

OBJECT: Digital Technologies Srl Società Benefit join Namirial Spa

Ambienta SGR SpA (“Ambienta”), one of Europe's leading and largest asset managers entirely focused on environmental sustainability, is pleased to announce that its platform company **Namirial S.p.A** (“Namirial”), a leader in digital transaction management, has acquired the shareholder majority of **Digital Technologies S.r.l. – Società Benefit** (“Digital Technologies”), replacing the previous financial partner Cafmagill.

Digital Technologies is the sixth acquisition carried out by Ambienta and Namirial as part of a consolidation strategy in the compliance-critical digital transaction management market.

Thanks to this operation, **Digital Technologies** is now part of one of the most important digital groups at worldwide level, that is now exceeding €180 million revenues, has 1045 employees and offices in 17 countries: Italy, Austria, Brazil, Costa Rica, Ecuador, France, Germany, Greece, Guatemala, India, Mexico, Peru, Portugal, Romania, Spain, Turkey and UK .

Digital Technologies is a provider of digital transaction management software with a focus on artificial intelligence and electronic invoicing. In particular, Digital Technologies has built a robust e-invoicing hub, capable of serving multiple international jurisdictions, effectively all countries that have already ruled e-invoicing across Europe, South America and Asia. In France for example Digital Technologies is already acting as an established PdP (Plateforme de Dématérialisation Partenaire). Leveraging on such platform, Namirial’s customers, that issue 300 million electronic invoices yearly, will be able to seamlessly deliver electronic invoices worldwide.

Headquartered in Trezzano sul Naviglio (Italy), **Digital Technologies is a B Corporation** that enables large corporations across industrial sectors to digitalize and automate finance, legal and supply-chain business processes via: (i) a proprietary document hyper-automation software platform based on artificial intelligence , (ii) a global e-invoicing hub and (iii) adjacent digital trust solutions such as digital signature, digital archiving and e-payments. Digital Technologies, which today employs 120 people, serves primarily large multinational companies that require a highly automated, regulation-compliant electronic invoicing platform able to operate globally.

Ambienta first acquired **Namirial** in May 2020, recognizing the importance of digitalisation in reducing the need for paper and travel, and its corresponding positive impact on the environment. All bolt-on acquisitions helped achieve impressive results: Netheos (November 2021) allowed the entry into the French market and strengthened the offering of digital onboarding solutions; Evicertia (January 2022) contributed to expand the footprint in Spain and Latin America and Namirial’s offer of certified communication products; Bit4ID (April 2022) further boosted the tech capabilities of Namirial as well as its international presence, also in some key emerging markets; Agenzia Trotta (September 2022) boosted Namirial’s offering in highly-specialised professional segments; Unimatica (September 2023) provided software products tailored for highly regulated industries such as the public administration and insurances.
